

## **Maintech Announces Expanded Warehousing, Asset Management and Logistics Services**

CRANFORD, N.J. - June 28, 2017 /PRNewswire/

Maintech, a third party maintenance company and a global provider of multi-platform, enterprise-level IT infrastructure support services and solutions, today announced the opening of a new technology center in Urbancrest, OH. The Maintech Technology Center provides 200,000 square feet of space for storage and staging of devices and assets. The facility includes multiple secure large-scale loading docks for equipment and freight reception, optional secure cages, 60 security cameras providing 24-hour manned video surveillance, year-round climate control, and storage space for client equipment.

Located five minutes south of Columbus, Ohio, this prime central location offers unparalleled access to the US and Canadian markets. 59% of the US population and 60% of the Canadian population resides within a one-day truck drive from the facility. The area is served by 2 international airports, 3 rail services, and 140 trucking companies, making this an ideal location to offer storage to clients across the US and Canada.

“Maintech understands the IT service industry and knows how to identify new patterns where we can help our clients gain better control of their environment,” said Roberto Osma, Solution Architect at Maintech. “Allowing Maintech to manage your assets and devices at our new technology center allows you to better focus your time discovering new revenue streams for your company.”

This new facility enables Maintech to offer the following new services to current and future clients:

### **Device Provisioning and Data Migration**

Create and install custom images for devices so that clients can blend them into their IT environment with the needed configuration (operating system, software, apps, wallpaper, etc). Asset tagging will record and identify which employee has which device.

### **Device Repair and Upgrades**

Instead of requiring skilled employees on hand to repair devices, clients can ship their broken devices to Maintech and simply swap out the broken device for a new one that is stored on location. Repair services include LED/LCD panels and monitors, projectors, printers, PCs, POS equipment, and consumer products such as tablets and smartphones.

### **Warehousing**

For clients with limited space on-site to store their assets, Maintech provides secure storage with 24-hour surveillance. Depending on the needs of each client, equipment can be shipped from the warehouse at whatever speed the client would like.

## **Logistics**

Maintech tracks client inventory by recording all inbound and outbound transactions. Audits and reports are provided at whatever frequency the client requires.

Additional services include hardware etching, UV printing, device kitting, and asset management/recovery and liquidation.

## **About Maintech**

Maintech was founded in 1973 as a [Third Party Maintenance](#) (TPM) company delivering IT Hardware Maintenance services to the Financial Services and Telecommunications marketplaces. Over the years, Maintech has evolved into a truly Independent Services Organization (ISO) delivering a comprehensive portfolio of single-source Managed Services for IT Infrastructure Support including Hardware Maintenance, NOC Monitoring, Server and Network Administration, Cloud Services, Help Desk, IT Asset Management/Destruction and many more. Maintech serves customers ranging from the SMB to the Fortune 100 global enterprise marketplace. Collectively, Maintech and its sister company DecisionOne, represent the largest IT Infrastructure Services-only company in the market today.
